

# Vox Pupuli

Managing 150 git repositories and contributions at scale

# \$ whoami

- Tim 'bastelfreak' Meusel
- DevOps Engineer for heg.com -> GoDaddy EMEA
- Puppet Contributor since 2012
- Merging stuff on Vox Pupuli since 2015
- Vox Pupuli PMC member
- Organizing BBQ events for Arch Linux Community

## What?

- Maintain over 100 Puppet modules
- Many files are identical
  - CONTRIBUTING.md, GitHub issue templates...
- Many files are almost identical
  - .travis.yml
- We need a single source of truth and consistency

## What?

- We want to release early and often
  - Release process needs to be easy and automated
- Tested code causes less future issues
  - We need a high coverage and unit + acceptance tests
- No matter how good your code is, nobody uses it without docs
  - Docs generated from the code, integrated into forge.puppet.com

How?

modulesync

- modulesync was developed by Puppet Inc, moved to Vox Pupuli
- Tool: <https://github.com/voxpupuli/modulesync>
- Template repo: [https://github.com/voxpupuli/modulesync\\_config](https://github.com/voxpupuli/modulesync_config)
- It takes a config file + templates, throws it into every modules git repo
- Works with GitHub Pull Requests
- Everybody can start it
- Every of our Collaborators can approve/merge it
